

Insurance QA MCP Server - Model Context Protocol for

Maharshi Soni | mcp | advanced

Description

An MCP (Model Context Protocol) server that extends AI assistants with QA automation tools for insurance domains. 10 tools for test execution, data generation, code analysis, and insurance validation. 4 resources for project scanning and domain knowledge. 3 prompt templates. Built with the official MCP Python SDK.

Tech Stack

mcp, pydantic, click, pytest, pandas, numpy, fastapi

Features

- 10 MCP tools: run_tests, generate_test_data, lint_code, validate_claim, validate_policy, find_flaky_tests, analyze_coverage, s
- 4 MCP resources: projects list, coverage data, insurance lines, test patterns
- 3 MCP prompts: review failures, plan test strategy, triage bug
- Full Claude Code ecosystem: CLAUDE.md, hooks, skills, agents, commands, rules
- P&C insurance domain validation for 8 lines of business

Sample Input

MCP tool call

Tool: validate_claim({"lob": "PersonalAuto", "loss_amount": 15000, "status": "open"})

Sample Output

Validation results

{"valid": true, "warnings": ["loss_amount near threshold for SIU review"]}
